

CHAPTER 5 ADVANCED ARITHMETIC OPERATOR DESIGN

- 5.1 4-Bit Binary Addition Design with Examples
- 5.2 4-Bit Binary Subtraction Design with Examples
- 5.3 Basic Concepts of 4-Bit Binary Multiplication with Examples
- 5.4 4-Bit Binary Multiplication with Examples
- 5.5 Booth's Multiplication Algorithm
- 5.6 4-Bit Array Multiplier Design with Examples
- 5.7 4-Bit Binary Divider Design with Examples
- 5.8 IEEE 754 Floating-Point Representation with Examples

COURSE REMINDER

- Today is the last session of makeup classes. Starting from the next week, the class time will be from 14:10 to 17:00. You are not required to arrive early.

5.1 4-BIT BINARY ADDITION DESIGN WITH EXAMPLES

- 4-Bit Binary Addition Design with Examples

5.2 4-BIT BINARY SUBTRACTION DESIGN WITH EXAMPLES

- 4-Bit Binary Subtraction Design with Examples

5.3 BASIC CONCEPTS OF 4-BIT BINARY MULTIPLICATION WITH EXAMPLES

- Basic Concepts of 4-Bit Binary Multiplication with Examples

5.4 BASIC CONCEPTS OF 4-BIT BINARY MULTIPLICATION WITH EXAMPLES

- Basic Concepts of 4-Bit Binary Multiplication with Examples

5.5 BOOTH'S MULTIPLICATION ALGORITHM

- Booth's Multiplication Algorithm

5.6 4-BIT ARRAY MULTIPLIER DESIGN WITH EXAMPLES

- 4-Bit Array Multiplier Design with Examples

5.7 4-BIT BINARY DIVIDER DESIGN WITH EXAMPLES

- 4-Bit Binary Divider Design with Examples

5.8 IEEE 754 FLOATING-POINT REPRESENTATION WITH EXAMPLES

- [IEEE 754 Floating-Point Representation with Examples](#)
